High quality cylinder with reliable access control

Who may open when and where? Professional management with the ELOCK2 software

Each user transponder receives its individual access rights, which are allowed to open according to your defined schedule.

A time control system allows locks to be automatically opened or locked at specified times - without the need for transponders.

Features:

- Time and calendar function with 254 time zones
- Time-limited transponder authorization (visitor function)
- Detailed reports on access activities
- Permanent open function, controllable via transponder or time zone controllable
- Alarm mode
(No access when alarm is armed)
- and much more

For home or small groups of users: Manage with one programming card

The Home & Office version of the locking cylinders allows you to assign access permissions without a PC and without prior knowledge. With a programming card you copy and delete your key transponders.

Features:

- Authorize/block transponder
- Emergency opening function with MorseCode
- Permanent open function

Cylinder variants

SLS61 Standard cylinder

SLS63 Dual cylinder

SLS64 Free knob

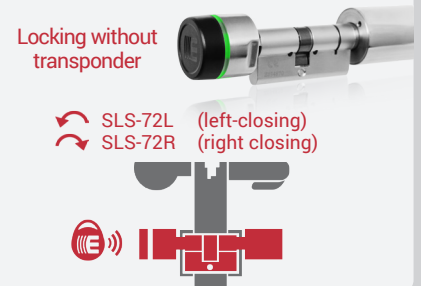

SLS65 Half-cylinder

SLS66 Single knob

SLS72 Comfort cylinder

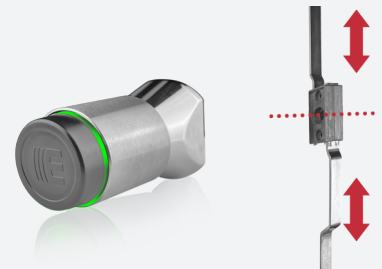

SLS67 Padlock

SLS68 Lever cylinder
(e.g. key box, drawer etc)

SLS69 Door bar lock
(zB. IT cabinet)

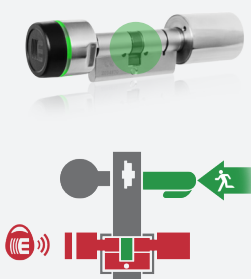

Cylinders for panic locks

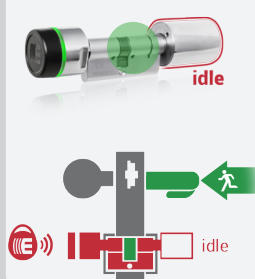

Defined position of the closing lug. Suitable for use in escape and rescue routes.

May be installed in panic locks with MPA test certificate.

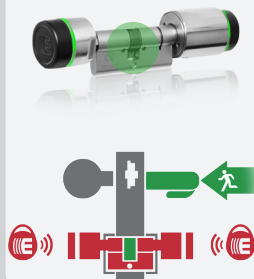

SLS71 Standard

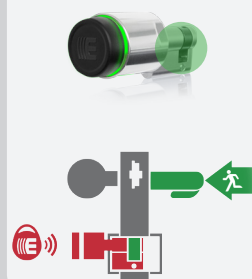

SLS74 Free knob

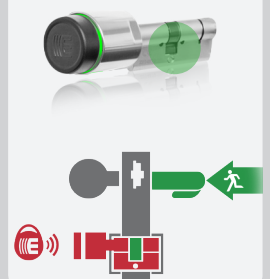

SLS73 Dual cylinder

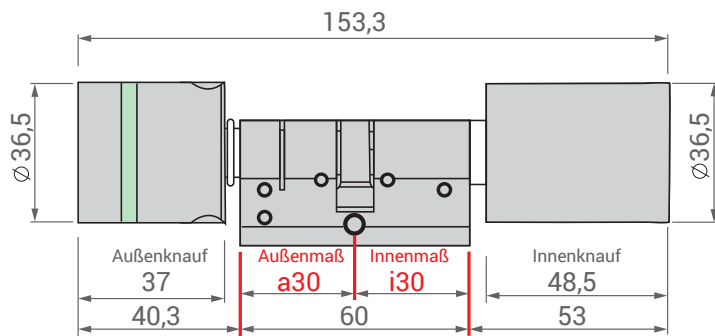

SLS75 Half-cylinder

SLS76 Single knob

General technical data

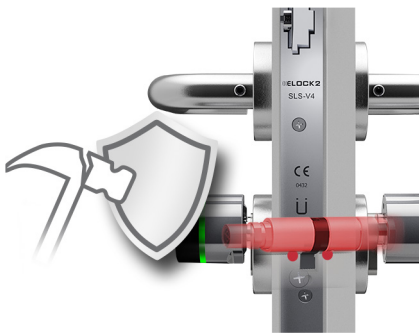

- Draw, break and impact protection
- CE approved
- Industry and DIN standardized

Technische Daten
im Detail

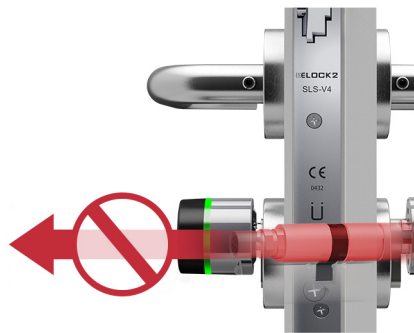

<https://elock2.com/index.php?id=571>

- Power Source:
1/2 AA lithium battery (battery life from 3 up to 5 years).
- Suitable for fire and smoke doors
- Temperature outdoor range -25°C to +70°C
- Electronics: Self-sufficient and tamper-proof in stainless steel housing
- Cylinder body standard dimension:
outside a=30mm / inside i=30mm (individually extendable)
- MyD ISO15693, 13.56 MHz

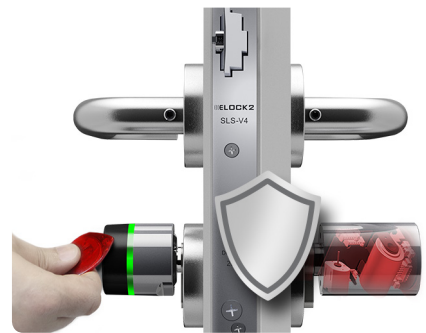

Impact and breakage protection

A special continuous shaft protects against destruction and burglary.

Pulling protection

The cylinder core is secured against breakage and extraction.

Highest security

The electronics on the inside are protected against hacker attacks.

Digital furniture locks

Access terminal e.g. for doors and barriers

ELOCK2 access system with 360° perfection

Patented systems and highly differentiated access management with ELOCK2 software with interfaces to alarm and database systems (according to open standards).

Wireless installation in all standard doors (including glass and tubular frame doors) significantly reduces investment costs in new construction and retrofitting compared to wired systems.

Excellent scalability in the introduction and expansion of locking systems, even for unnetworked properties, thanks to virtual networking. Systems are suitable for fire doors and escape doors.

Excellent technical support for hardware and software from qualified service partners and directly from the manufacturer ELOCK2 - the medium-sized family business with short routes.
