# ELOCK2

## Fitting lock B-Series

INNOVATIVE ACCESS SOLUTIONS FROM  
THE FIRST PLACE WINNER

**MADE IN GERMANY**

**Intelligent  
Access Management**

**Robust and high quality  
stainless steel**

**drill-free &  
easy mounting**

## Attach, fix, done!

### Access management for every door

Thanks to the simplified mounting technique, the B-series can be mounted on any door quickly and easily.

The geometric stainless steel housing with its minimalist design matches any door and leaves a high-quality impression.

### Intelligent and user-friendly access control

Access control on a digital ELOCK2 system allows you to authenticate yourself conveniently with a transponder, smartphone or Morse code. The electronic control system is self-sufficient and tamper-proof, integrated in the stainless steel housing of the lock.

### Who is allowed to open when and where?

Each user transponder receives its individual access rights, which are allowed to open according to a defined schedule. By means of a time control system, locks can be opened or closed automatically at specified times - without any transponders at all.

## Continue to use existing interior clothings

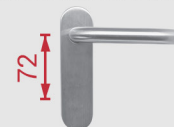

### Existing handling parts

B4VG  
for existing  
rosette set

B4VK  
for existing  
short handle set

B4VB  
for existing  
long handle set

B4VM  
for existing  
tubular frame set

### Digital blocking set H9:

If the H9 is used from the inside authorized transponders have no access (e.g. meeting room or „teachers“ WC)

When locked, the door can be opened from the inside at any time.

### Suitable for any sector

The digital fitting lock B4 is suitable for standard, escape, fire or smoke protection doors. The electronic fitting lock meets the growing demands of guests in hotels, nursing homes, youth and boarding houses, as well as apartments and offices.

## Lock variants

### Model B3: With external power supply

- Opening with e.g. ELOCK2 access system, bell system or third-party system
- Can be optionally combined with mechanical locking cylinder
- Optionally open with transponder

Intelligent escape route protection

Digital padlocks and tube safes

Digital furniture locks

Access terminal e.g. for doors and barriers

## ELOCK2 access system with 360° perfection

Patented systems and highly differentiated access management with ELOCK2 software with interfaces to alarm and database systems (according to open standards).

Wireless installation in all standard doors (including glass and tubular frame doors) significantly reduces investment costs in new construction and retrofitting compared to wired systems.

Excellent scalability in the introduction and expansion of locking systems, even for unnetworked properties, thanks to virtual networking. Systems are suitable for fire doors and escape doors.

Excellent technical support for hardware and software from qualified service partners and directly from the manufacturer ELOCK2 - the medium-sized family business with short routes.
