Ü
DO 20.34

**Worry-free:
Never forget to lock up again!**

Automatic lock with panic function

There is no need for tiresome opening and closing. When the door is closed, the lock locks automatically in compliance with insurance regulations. The innovative and patented latch bolt of the ELOCK2 mortise lock combines the latch and deadbolt components of conventional mortise locks in a single ingenious component made of high-strength steel. The latch bolt automatically engages 20mm deep into the striking plate and thus corresponds to a twice locked conventional lock.

Model M1: Mechanical middle latch lock

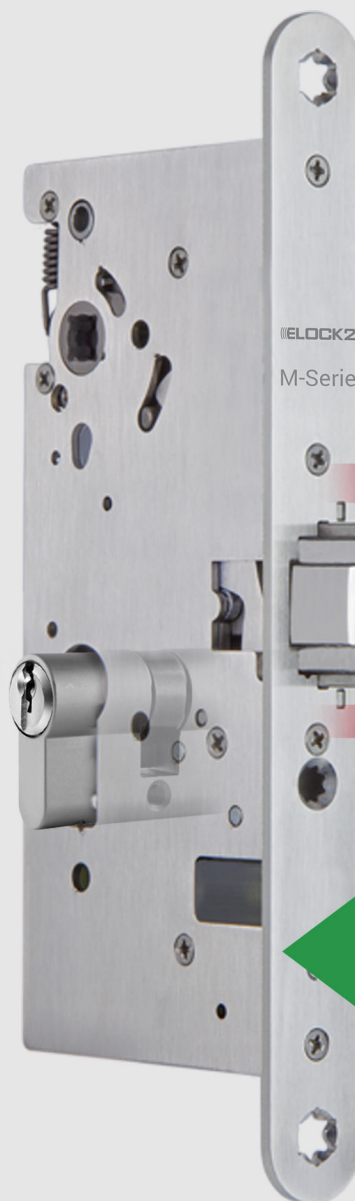

High quality
Weatherproof housing made of high quality stainless steel.

Certified
Suitable for fire doors/escape doors.

Only with ELOCK2
Patented lock with reinforced latch bolt, automatic self-locking and panic function

Escape direction always free
The panic function allows the door to be opened quickly from the inside with a single movement despite being permanently locked.

All mechanical automatic locks

20mm

Door closed = automatic full locking

Direction of escape always free (panic function)

Easy to retrofit and convert

Easy and clear installation in existing doors. You get state-of-the-art technology that can be integrated into existing doors or premises in no time at all without any conversion. With the automatic lock, the standard or existing fittings can continue to be used.

Industry and DIN standardized

ELOCK2 locks are recognized by insurance companies as effective burglary protection and are approved for: Escape and rescue routes, fire and smoke protection doors.

Mechanical / digital automatic locks with panic function

Digital locking cylinders (also with panic function)

Intelligent escape route protection

Digital padlocks and tube safes

Digital furniture locks

Access terminal e.g. for doors and barriers

ELOCK2 access system with 360° perfection

Patented systems and highly differentiated access management with ELOCK2 software with interfaces to alarm and database systems (according to open standards).

Wireless installation in all standard doors (including glass and tubular frame doors) significantly reduces investment costs in new construction and retrofitting compared to wired systems.

Excellent scalability in the introduction and expansion of locking systems, even for unnetworked properties, thanks to virtual networking. Systems are suitable for fire doors and escape doors.

Excellent technical support for hardware and software from qualified service partners and directly from the manufacturer ELOCK2 - the medium-sized family business with short routes.
