relaxed
open with MorseCode

Your invisible second key:

ELOCK2 systems can be opened by transponder or additionally with the MorseCode. The Morse code can be selected individually, it can be between 1 and 16 characters long.

Your unbeatable added value at a glance:

worry free:
never locked
out again

relaxed:
leave your
transponder at home

easy:
remotely
permit access

fast:
In case of emergency,
send the Morse code

Convenient

No extra load, no search - open the door without a physical key. Fast access for you, your guests and logistics companies.

Emergency code

Remotely grant easy and fast access to emergency services (fire department, emergency doctor, nursing service, etc.).

Freedom

Create your key code in seconds and open keylessly via MorseCode.

Locked out?

Never again wait for the locksmith and pay expensive. Stay independent with MorseCode.

One-time code

The Morse code is only valid/usable once. After that, the MorseCode function is deactivated on this locking system.

Emergency permanent

The MorseCode is valid and usable at any time without limitation.

Individual permanent MorseCode

Each user gets his own personal Morse code, uniform for all ELOCK2 locking systems.

Simple programming

With a valid transponder, you type in your individual MorseCode characters - at any time and without a PC or programming card.

MorseCode - Your invisible second key

Emergency! Key forgotten or lost? Open with MorseCode!

Enter Morse code **by pressing** it

Digital padlocks and tube safes

Digital furniture locks

Access terminal e.g. for doors and barriers

ELOCK2 access system with 360° perfection

Patented systems and highly differentiated access management with ELOCK2 software with interfaces to alarm and database systems (according to open standards).

Wireless installation in all standard doors (including glass and tubular frame doors) significantly reduces investment costs in new construction and retrofitting compared to wired systems.

Excellent scalability in the introduction and expansion of locking systems, even for unnetworked properties, thanks to virtual networking. Systems are suitable for fire doors and escape doors.

Excellent technical support for hardware and software from qualified service partners and directly from the manufacturer ELOCK2 - the medium-sized family business with short routes.
